

EBBERTS 957

Early Maturity - Bearded Head Type

Ideal for Double Crop Soybeans

Consistent High Yielder

Heavy Test Weight (Our Best)

Great Scab Tolerance

Notes and Management: Early maturity genetics with impressive yield potential and heavy test weight. Expect early harvesting, ideal for growers looking to plant double crop soybeans following wheat. Excellent straw strength on medium statured plants offering great standability for growers split applying or push higher nitrogen rates. Good disease package for head scab and stripe rust.
