

## A close-up, low-angle shot of a dense field of wheat or barley. The plants are vibrant green, with long, slender leaves and numerous upright, developing grain heads. The perspective creates a sense of depth, with the plants in the foreground being more detailed and those in the background receding into a soft-focus horizon. The sky is a pale, clear blue, visible at the very top of the frame.

## Smooth Head Type

## HEAVY TEST WEIGHT

## EXCELLENT FOR STRAW PRODUCTION

## HEAD SCAB RESISTANT

ELITE YIELDER with an AWESOME disease package, 1-2 days earlier in maturity than Ebberts 903. Big plant type with lots of tillering that maximizes straw production. Attractive long heads that add yield. Great variety for 15" row widths. Works well for all soil types and yield environments, good choice for poorly drained fields.
